laundriroom — How an Order Flows

Speaker notes · 24 slides

SLIDE 1

How an order flows

Welcome. In one run we'll follow a single order from the moment a customer finds a laundry to the moment the laundry is paid. At every step we'll look at both sides: what the customer does on their phone, and what the vendor's team does on the tablet. Then we'll cover what vendors do behind the scenes, and finish with how to pitch laundriroom to a new vendor. All screenshots are from the real app with demo data.

SLIDE 2

Today, in three parts

Three parts. First, the order cycle: we follow one order through nine steps, always showing the customer's side and the vendor's side together, and the value each step creates. Second, the things vendors do behind the scenes that don't belong to any one order. Third, how to put it all into words when you meet a potential vendor.

SLIDE 3

Who's involved

Five roles. The customer uses the phone app. On the vendor side there are two kinds of staff: the manager, who runs the business, and attendants, who work the counter. Riders can be the vendor's own or a dispatch partner, and they don't need an account — the customer's PIN is what confirms a pickup or delivery. laundriroom sits behind every order: payments, automatic payouts, support, claims and quality standards. A business with several shops can also give staff access to just one branch; we'll come back to that.

SLIDE 4

One order, nine steps

Here's the whole cycle on one slide. Every order follows these nine steps, whether it came through the app, the vendor's own link, or was entered at the counter for a walk-in customer. The next nine slides take each step in turn. On each one, the left card is what the customer does, the right card is what the vendor does, and the dark band at the bottom is the value — the line to remember when you talk to a vendor.

SLIDE 5

Finding a laundry

Every vendor gets a public profile page the moment they join, with its own web link — no setup needed. It shows the business name, branches and opening hours, the “Verified business” badge once their ID and CAC are checked, star ratings and recent reviews, and the full price list. Anyone can open it, signed in or not, and the Order button takes them straight into an order with that laundry. The vendor can copy the link, send it on WhatsApp, or print the QR code for the counter. Key message for vendors: it’s a free storefront that works for the customers they already have, as well as new ones finding them in the app.

SLIDE 6

Placing the order

The order form walks the customer through every choice. Which branch. Standard or Premium service — Premium unlocks extras like stain treatment or a delicate hand-wash. Normal or Express turnaround. How it gets to the shop: drop it off, or have it picked up. How it comes back: collect it, or have it delivered — by the vendor’s own rider or a dispatch partner — to a saved address. The delivery fee is quoted before they book; where distance pricing is switched on it’s worked out from the real driving distance. Then they choose to pay online once the items are priced, or on delivery. Item prices aren’t set yet — staff price each item at check-in. On the vendor side, that branch’s staff get an email and WhatsApp alert straight away, and the order appears in the queue under New and incoming. Staff can also enter orders for walk-in or phone customers, so every order lives in one place.

SLIDE 7

Getting it to the shop

Two ways in. A drop-off customer simply brings the clothes to the branch during its opening hours. For a pickup, the vendor sends a rider — its own, or a dispatch partner it books, and it can log the dispatch booking reference. The customer’s app shows a 4-digit pickup PIN; the rider asks for it and staff enter it on the order to confirm collection. Riders don’t need to download anything or have an account. Why it matters: the customer knows their clothes only go to the right person, and the vendor has proof of every collection.

SLIDE 8

Tagged and priced

This is where the order gets its detail. For each garment the attendant attaches one of the vendor’s printed tags and scans its QR code with the tablet camera — or types the short code, like FPL-0042. They pick the item type and service (wash and fold, dry clean, or press only), and the price fills in from the vendor’s own price list (the button also shows what the customer pays, with laundriroom’s commission added), so every branch charges the same. Then the evidence: condition notes such as “small tear at hem” and photos of stains or damage. The customer sees every item, its tag and price in the app, and the full total before paying. That evidence is what settles a damage claim fairly later on — it protects the vendor from being blamed for damage that was already there.

SLIDE 9

Every stage, live

As the batch moves through the shop, staff tap each stage on the tablet: sorting, washing, drying, pressing, quality check, packaging and final completion. The stages run in order, and skipping one needs a manager — that builds a quality check into every single order. The customer's app updates as each stage is done, and the order's activity log keeps a time for every step. For the vendor, that means fewer "is it ready?" calls and a routine every team member follows the same way. Final completion marks the order ready.

SLIDE 10

Paying, without cash

Once the items are checked in and priced, the customer can pay in the app through laundriroom's payment partner (Paystack or Flutterwave). Customers who chose pay on delivery still pay in the app — they tap Pay now when the rider arrives — so the vendor never handles cash. Discounts are applied on the bill: promo codes, referral rewards, and an automatic bulk discount for large orders. Who funds a discount matters: platform promos and the bulk discount come out of laundriroom's share, not the vendor's; a promo the vendor creates itself is vendor-funded. We cover the money in detail in a few slides.

SLIDE 11

Back to the customer

When the order is ready, it either waits for collection or goes out for delivery. For delivery, staff assign a rider by name and phone — their own or a dispatch partner — and tap Send out for delivery. The rider carries the order code. The customer's app shows a 4-digit handover PIN; the rider or the counter confirms it and the order closes. A pay-on-delivery customer simply pays in the app at the door, which closes the order too. If a delivery doesn't happen, staff reschedule it: when the customer wasn't available, a small penalty — a share of the delivery fee set by laundriroom — is added to their bill; when it was the vendor's error, there's no penalty.

SLIDE 12

After the handover

Once the order is complete, the customer can rate it from 1 to 5 stars and leave a comment. Good reviews appear on the vendor's profile page and in the app, which helps them win new customers. A 1- or 2-star review immediately emails and WhatsApps the vendor, asking them to contact the customer and put it right. If something is damaged or missing, the customer reports it on the order; laundriroom's team resolves it using the check-in photos and notes — the same evidence that protects the vendor. Customers also have a referral code: when a friend completes their first order, the customer gets a reward promo. Behind the scenes, the garment tags on the order are freed automatically for the next one.

SLIDE 13

The vendor gets paid

This is the step vendors care about most. As soon as an order is completed and paid, the payout is worked out and sent to the vendor's bank account automatically through Paystack — there's nothing to request and no invoice to send. Nothing is deducted: the commission was added on top of the vendor's prices for the customer, so the vendor receives their own prices, extras and delivery in full. The vendor sets their bank account once, under Ledger → Payout account, and the account name is checked with the bank. Every payout, with its gross, fee and net, shows in the Ledger. Two exceptions to mention if asked: laundriroom can set a short hold window before payouts go out, and a payout on a disputed order is held until the dispute is resolved.

SLIDE 14

Where the money goes

laundriroom's commission is added on top of the vendor's prices — nothing comes off what the vendor charges. A ₦200 shirt with a 30% commission shows the customer ₦260, and the vendor is paid ₦200. The commission is one rate for every vendor and applies to item prices only — not to delivery or premium extras; fill in the current rate before presenting. The order total is the items at those prices, plus any premium extras, the delivery fee, and an express or premium charge if the customer chose those — less any discount. Express and premium are percentages of the vendor's price, set by laundriroom and kept by laundriroom. The commission is charged on the normal turnaround; when a customer picks express, the express charge replaces the commission. Premium is added on top either way. So with a 30% commission, 20% express and 12.5% premium, a ₦200 item costs ₦260 normal, ₦285 normal premium, ₦240 express and ₦265 express premium — and the vendor gets ₦200 every time. The vendor receives their own item prices, extras and delivery in full. Discounts: on a promo code the vendor creates, the vendor gives up only their share — laundriroom gives up the share on its commission; laundriroom's own promos, referral rewards and the bulk discount come entirely out of laundriroom's share. There's no subscription — vendors only pay when they earn, and their customers carry the commission.

SLIDE 15

Behind the scenes

Part 2. Everything so far happened inside one order. These six topics are the work vendors do around their orders — setting up, running a team, printing tags, marketing themselves, keeping their books and looking after their reputation. When you talk to a vendor, these are often what convinces them that laundriroom runs their business, not just takes orders.

SLIDE 16

Joining laundriroom

How a vendor comes on board. They fill in the application on laundriroom's website and accept the Partner Agreement — the terms they work under, including non-circumvention: customers introduced through laundriroom are served through the platform for twelve months. laundriroom reviews the application and approves it, which creates the vendor's account. Verification doesn't hold them up: they upload a government ID and their CAC certificate from Vendor → Verification, and once laundriroom checks them the "Verified business" badge appears on their page. Then they add branches, prices and staff, set their payout bank account, and start sharing their link. If the Partner Agreement changes later, vendors are asked to accept the new version.

SLIDE 17

Branches and team

A vendor is one business with one or more branches. Every vendor starts with a main branch; the business-wide manager can add more, each with its own address, phone, opening hours and an open-or-closed switch for days off. The business keeps one price list, one payout bank account and one profile link across all branches, and its public page lists every branch so customers pick the nearest. Staff can be business-wide, seeing everything, or tied to one branch, in which case they only see that branch's orders and alerts. Attendants who meet an item that isn't on the price list can request a new item type, and the manager approves it with a price. This is a strong point for growing laundries with more than one shop.

SLIDE 18

Garment tags

Tags are how every garment stays matched to its order. From Vendor → Tags the manager generates a batch — up to 500 at a time. Each tag has a QR code and a short code made of the business's prefix and a number, like FPL-0042. The prefix comes from the business name automatically and belongs to that vendor alone; numbers never repeat. The tags print on ordinary A4 paper as 2, 2.5 or 3 cm squares, with dashed cut lines and a punch mark for a safety pin or tag gun. The tag history keeps every batch. If a tag goes missing or gets damaged, staff mark it and reprint just that tag, the batch's missing ones, or the whole set. When an order closes, its tags are freed to use again.

SLIDE 19

Page and promotions

Vendor → My page is the vendor's marketing kit. The link to their public page is ready to copy, there's a one-tap WhatsApp share, and a QR code to download and print for the counter or flyers. The page shows how many orders and customers came through that link, so vendors can see it working. Vendor → Promos lets them run their own campaigns: they create a discount code, set how many times it can be used and when it expires, and fund the discount themselves. This is how a vendor moves their existing WhatsApp and walk-in customers onto app orders — tracked, paid in the app and recorded in their books.

SLIDE 20

Ledger and books

The Ledger is the vendor's bookkeeping, built from their orders automatically. At the top: income from paid orders, expenses, net, and the payout due (their own prices, in full), plus income split by branch. Vendors can log their own costs — diesel for the generator, detergent, hangers — attach receipts, and see a daily cash-up of income against expenses. Every payout is listed with its gross amount, laundriroom's fee, the net paid and its status. Statement, payouts and transactions reports download as PDFs, ready for an accountant or a bank. For many small laundries this replaces a notebook.

SLIDE 21

Reviews and standards

Vendor → Reviews shows the rating summary and every review. Each 1- or 2-star review also emails and WhatsApps the vendor straight away, asking them to look into it, contact the customer and resolve it promptly. laundriroom watches for patterns: a vendor is flagged when low ratings repeat — for example three in thirty days, or more than the month before. The process is fair and in the open: first an inquiry asking what happened, which the vendor answers on this page; then a warning if it continues; and only then suspension. Position it to vendors as protection: customers trust the platform because standards are kept, and that trust is what sends good laundries their orders.

SLIDE 22

The pitch, in six lines

If a vendor remembers six things, make it these. One: a free storefront — their own page, link and QR code from day one. Two: orders organised — whether a customer orders in the app, through their link, walks in or phones, it's all in one queue, by branch. Three: protection — tags, check-in photos and PINs prove what happened at every handover. Four: paid automatically — each completed order pays out to their bank account. Five: books that keep themselves — income, expenses, cash-up and statements. Six: they keep their full price — laundriroom's commission is added on top for the customer, and there's no subscription. Lead with whichever matters most to the vendor in front of you: payment speed for a busy shop, organisation for a growing one, protection for one that has been burned by disputes.

SLIDE 23

What vendors ask

The questions vendors ask most, with short answers you can give with confidence. Cost: nothing comes off their prices. laundriroom adds its commission — the same rate for every vendor — on top of their item prices for the customer, so a ₦200 shirt at 30% shows the customer ₦260 and the vendor still gets ₦200. Delivery carries no commission, and on an express order the express charge replaces it. Quote the current rate. No subscription. Payment: automatic, to their bank, as soon as an order is completed and paid; laundriroom can set a short hold window, and a disputed order's payout waits until it's resolved. Riders: their own, a dispatch partner, or both; riders need no account. Their own customers: yes — share the link or QR, and staff can enter walk-in and phone orders. Damage claims: the check-in photos and condition notes are the evidence. The Partner Agreement: the terms they accept when applying, including non-circumvention — customers introduced through laundriroom are served through the app for twelve months from that customer's first order. Several shops: each becomes a branch under one account.

SLIDE 24

Every step adds value — for the customer and for the laundry.

To close: the one idea to carry into every vendor conversation is that each step of the order adds value to both sides — the customer gets confidence and convenience, and the laundry gets organisation, protection and prompt payment. For practice, pair up: one person places a demo order on a phone while the other runs it through on the tablet, from check-in to handover. Then take turns giving the six-line pitch and answering the FAQ.
